Ecosystem Intelligence

One place to understand ecosystem quality, structure, expectancy, and capital-allocation context.

Why should I care?

Use Ecosystem Intelligence to decide whether a creator, network, funder, or farm structure has produced quality before, how coordinated it is, and whether our actual strategy has ever earned money there. The structure lenses below preserve all graph richness without making the graph implementation the product.

CANONICAL ENTITIES

Creators

Launch history, historical outcomes, runner production, and the bridge into creator dossiers.

Ecosystems

Network-level quality, risk composition,
historical outcomes, and simulation coverage.

Funders

Expectancy attribution for capital sources and the creators they historically support.

Farm Structures

Cluster output, token history, and concentration patterns across detected farms.

STRUCTURE LENSES

Overview

Joined ecosystem context across released networks, farms, coordinators, and coverage.

Coordinators

Wallets that organize multiple creators and concentrate operator influence.

Shared Funding

Overlap-driven coordination
evidence across funders and creator
groups.

Farm Structure

Detected farm clusters, member roles, and repeated launch patterns.

Graph Evidence

Raw transfer-index diagnostics and analyzer freshness when deeper proof is needed.

Released Networks

Legacy network index retained as an explorer view while consolidation proceeds.

⚡ Flash Spike Analysis

Migrated tokens that hit **\$400k+ peak market cap within 3 hours of DEX listing**. The spike pattern: token migrates from pump.fun → creator (or coordinated buyers) immediately floods the new pool → MC rockets → snipers follow → creator exits. 84 tokens identified across 82 unique creator wallets.

PATTERN OVERVIEW

INTELLIGENCE

Two distinct populations share this spike behaviour:

Group 1 — Serial Heavy Operators (~16% of tokens)

Repeat operators with 100–1,400+ tokens each. CRITICAL/HIGH risk scores. Categories include *SELF_FUNDING_FARM* and *SERIAL_DUMPER*. These wallets are known bad actors running the spike play at industrial scale. The largest (**AV7PjXHL**) has 1,424 total tokens with 24 migrations.

Group 2 — Disposable Single-Launch Wallets (~84% of tokens)

Fresh creator wallet, one token, one migration, never reused. Funded 3–15 SOL from either a shared aggregator or a direct CEX withdrawal. Four of ten shared funders are *cex_confirmed* — suggesting self-withdrawal to fresh wallets to avoid fingerprinting.

Infrastructure Overlap

AxiomRXZA appears as a shared funder here *and* as the upstream treasury in the coordinated ring investigation (5ZuV8eq / 9gYjJ2). **ATRsNGv2** (Raydium CAMM pool used as profit drain by the ring) appears upstream of **2snHHreX** — the largest funder in this set (390 SOL across two creators). Same capital, different plays.
